### Variant 1

#### Exercise 1. Переведите текст, выпишите сказуемые и укажите их формы.

Mechanical properties of materials. All materials respond to these forces by elastic deformation. That is, the materials return their original size and form when the external force disappears. The materials may also have permanent deformation or they may fracture. The results of external forces are creep and fatigue.

Compression is a pressure causing a decrease in volume. Tension is a pulling force; for example, the force in a cable holding a weight. Fatigue is the growth of cracks under stress. Creep is a slow, permanent deformation that results from a steady force acting on a material.

### Variant 2

#### Exercise 1. Переведите текст, выпишите сказуемые и укажите их формы.

Hacksaws are a common workshop tool. The frames come in a range of shapes and sizes. For any given frame there's a range of available hacksaw blades to cope with different materials and situations. The correct screw-driver to use depends on the type of slot or recess in the head of the screw or bolt, and how accessible it is. The bench vice is a plain vice that will hold anything that needs sawing, filing, or chiseling. The G-clamp holds parts together while they're being worked on. There are many types of spanners.

### Variant 6

#### Exercise 1. Переведите текст, выпишите сказуемые и укажите их формы.

A passenger train is one which includes passenger-carrying vehicles which can often be very long and fast. In most countries, such as the United Kingdom, the distinction between a tramway and a railway is precise and defined in law. The term light rail is sometimes used for a modern tram system, but it may also mean an intermediate form between a tram and a train, similar to a heavy rail rapid transit system except that it may have level crossings.

A freight train (also known as a goods train) uses freight cars (also known as wagons or trucks) to transport goods or materials (cargo). Freight and passengers may be carried in the same train in a *mixed consist*.

### Variant 7

#### Exercise 1. Переведите текст, выпишите сказуемые и укажите их формы.

In the United States, the term *consist* (/ˈkɒnsɪst/**KON**-sist) is used to describe the group of rail vehicles which make up a train. When referring to motive power, *consist* refers to the group of locomotives powering the train. Similarly, the term *trainset* refers to a group of rolling stock that is permanently or semi-permanently coupled together to form a unified set of equipment (the term is most often applied to passenger train configurations).

There are three types of locomotive: electric, diesel and steam.

One notable and growing long-distance train category is high-speed rail. Generally, high speed rail runs at speeds above 200 km/h (120 mph) and often operates on dedicated track that is surveyed and prepared to accommodate high speeds. Japan's Shinkansen ("bullet-train") commenced operation in 1964, and was the first successful example of a high speed passenger rail system.

#### Exercise 1. Переведите текст, выпишите сказуемые и укажите их формы.

The fastest wheeled train running on rails is France's TGV (Train à Grande Vitesse, literally "high speed train"), which achieved a speed of 574.8 km/h (357.2 mph), twice the takeoff speed of a Boeing 727jetliner, under test conditions in 2007. The highest speed currently attained in scheduled revenue operation is 350 km/h (220 mph) on the Beijing–Tianjin Intercity Rail and Wuhan–Guangzhou High-Speed Railway systems in China. The TGV runs at a maximum revenue speed of 300–320 km/h (190–200 mph), as does Germany's Inter-City Express and Spain's AVE (Alta Velocidad Española).
